Installation Dimensions

Material Determination

Recommended material for wall surface construction:
- Gypsum / green board
- Cement board
- Tile backer board
- Ceramic tile surface

Minimum wall material thickness 3/8” (10 mm)
Installation

Installation Requirements
To install tank and carrier, a 2 x 4" wood frame or metal frame construction is required. Studs must be placed 19 3/4" apart (clearance) where carrier will be positioned inside the wall.

Prepare

FF: Finished Floor Height
FSH: Finished Seated Height
ST: Seat thickness, based on seat model
RT: Distance from fixture rim to mounting centers, based on ceramic model
H: Frame Height, subject to conditions below:
H = FSH - RT - ST + 34¼" (870)

These values are not needed at roughing in, but may be useful as alternate references:

FV: Flush Valve Height (see below)
R: Rod Height, based on ceramic model and FSH (see below)
D: Drain outlet, based on ceramic model and FSH (see below)

For convenience, values for a “typical” situation are included in the following chart:

** Assumes a typical seat thickness of 1" and a distance from fixture rim to mounting rod centers of 3". Always refer to the manufacturer specification sheet for the latest information!

These dimensions are used for later, after the frame is installed:

RC: Rod Center-to-Center Distance, based on ceramic model

Other calculations (for reference only)

FV = FSH - RT - ST + 26 3/8" (670)
R = FSH - RT - ST
D = FSH - RT - ST - 4" (100)
or
FV = R + 26 3/8" (670)
H = R + 34 ¼" (870)
D = R - 4" (100)
